

**ATTACHMENT FOR CLAIM AMENDMENTS**

The following is a marked up version of each amended claim in which underlines indicates insertions and brackets indicate deletions.

1. (Amended) A miter saw comprising:

a base;

a table rotatably attached to the base;

a saw assembly pivotably connected to the table, said saw assembly comprising a rotatable cutting tool, a motor driving the cutting tool, and a housing covering the motor, the cutting tool being pivotably movable about a chopping axis in order to move the cutting tool towards the table for cutting a workpiece, the cutting tool being movable between a first position substantially perpendicular to the table, a second position inclined in a first direction from the first position, and a third position inclined in a second direction from the first position, the second direction being opposite to the first direction;

a first fence assembly disposed on one side of the base, the first fence assembly comprising a first fixed fence [associated with]attached to the base, and a first movable fence being interconnected with the first fixed fence; and

a second fence assembly disposed on the other side of the base, the second fence assembly comprising a second fixed fence [associated with]attached to the base, and a second movable fence being interconnected with the second fixed fence.

14. (Amended) The miter saw of Claim 1, further comprising a first member attached to said first fixed fence for releasably holding the first movable fence in a predetermined position in relation to the first movable fence in a predetermined position in relation to the first fixed fence.

15. (Amended) The miter saw of Claim 14, further comprising a second member attached to said second fixed fence for releasably holding the second movable fence in a predetermined position in relation to the second fixed fence.

22. (Amended) A compound miter saw [having a base and a saw blade selectively movable to any of a number of selected cutting positions] comprising:

a base;

a table [disposed between said base and said saw blade, said table being] rotatably supported by said base, said table and said base defining a first planar workpiece supporting surface;

a saw blade rotatably supported by said base;

an adjustable, laterally-extending, workpiece-supporting fence assembly, said fence assembly including a first fixed fence fixedly interconnected with the base and disposed on one side of the saw blade, and a movable fence selectively laterally movable and interconnected with the base and disposed on said one side of said saw blade, said first fixed fence defining a second planar workpiece supporting surface which extends a first distance from said first planar workpiece supporting surface and said movable fence defining a third planar workpiece supporting surface which extends

a second distance from said first fixed fence, said first fixed fence and said movable fence being located on said one side of said saw blade, said second distance being greater than said first distance.

23. (Amended) A compound miter saw according to Claim 22, further comprising a second fixed fence [portion] fixedly interconnected with the base and disposed on an opposite side of the saw blade, said second fixed fence [portion] further defining said second planar workpiece-supporting surface.

24. (Amended) A compound miter saw according to Claim 23, wherein, said second fixed fence [portion] is integral with said first fixed fence [portion].

25. (Amended) A compound miter saw according to Claim 22, further comprising a fixed clamping means fixedly interconnected to said base for selectively and clampingly securing said movable fence [portion] to the base.

26. (Amended) A compound miter saw according to Claim 22, further comprising a fixed clamping means fixedly interconnected to said base for selectively and clampingly securing said movable fence [portion] to the base, and a movable clamping means fixedly interconnected with said movable fence [portion] for selectively and clampingly securing said movable fence [portion] to the base.
